

## **telerik r.a.d.editor brings cross-browser / cross-platform content authoring to Microsoft Office SharePoint Server 2007**

(November 1, 2006) Telerik announced the availability of Telerik r.a.d.editor for Microsoft® Office SharePoint Server 2007.. The product is intended to extend the web content authoring environment of Office SharePoint Server 2007 by providing cross-browser compatibility and support for the Macintosh platform. r.a.d.editor offers the same functional level as the integrated rich text editor and will be provided by telerik at no cost to all registered customers of Office SharePoint Server 2007.

r.a.d.editor for Office SharePoint Server 2007 is a specially modified version of Telerik's award-winning content editor for ASP.NET. Featuring a familiar Word-like interface, the editor enables non-technical users to author and manage HTML content as easily as writing a Microsoft Office Word document.

As of 2004 Microsoft Corp. and Telerik made available a special version of r.a.d.editor for integration in Microsoft Content Management Server 2002 (MCMS). It is used by many MCMS customers today for an enhanced web authoring experience.

Telerik's editor supports the following browsers: Mozilla, FireFox, and Netscape on PC and Mac, as well as Safari on Mac. When working with r.a.d.editor, end-users will notice little or no difference compared to the default editor.

"Telerik provides a great integrated web authoring editor for Office SharePoint Server 2007 that we're very excited about," said Arpan Shah, Group Product Manager, SharePoint Products and Technologies at Microsoft Corp. "With Telerik's editor, customers can manage web content using different browser technologies. Bottomline, Telerik is a strong Microsoft partner, whose responsiveness and first-class support has always kept both us and our customers happy."

The deployment process of Telerik r.a.d.editor is a matter of single click. The installer copies all required files and patches the necessary scripts, leaving absolutely nothing else to be done on the side of the developer or the end-user.

"Microsoft SharePoint products and technologies always been a key priority in our product development plans. Our team is impressed with the extensibility of the platform, and that's probably why the porting of r.a.d.editor to Office SharePoint Server 2007 went like a breeze," said Stoyan Stratev, Lead Developer of the SharePoint integration team, Telerik Corp. "I hope that customers will be pleased when we release Office SharePoint Server 2007 versions of our other ASP.NET components, which will happen shortly".

Telerik r.a.d.editor for Office SharePoint Server 2007 is available at no cost to all customers of Office SharePoint Server 2007. A beta version of r.a.d.editor for OSPPS 2007 will be available in the beginning January 2007. Telerik will launch the final version during the second half of January 2007.
